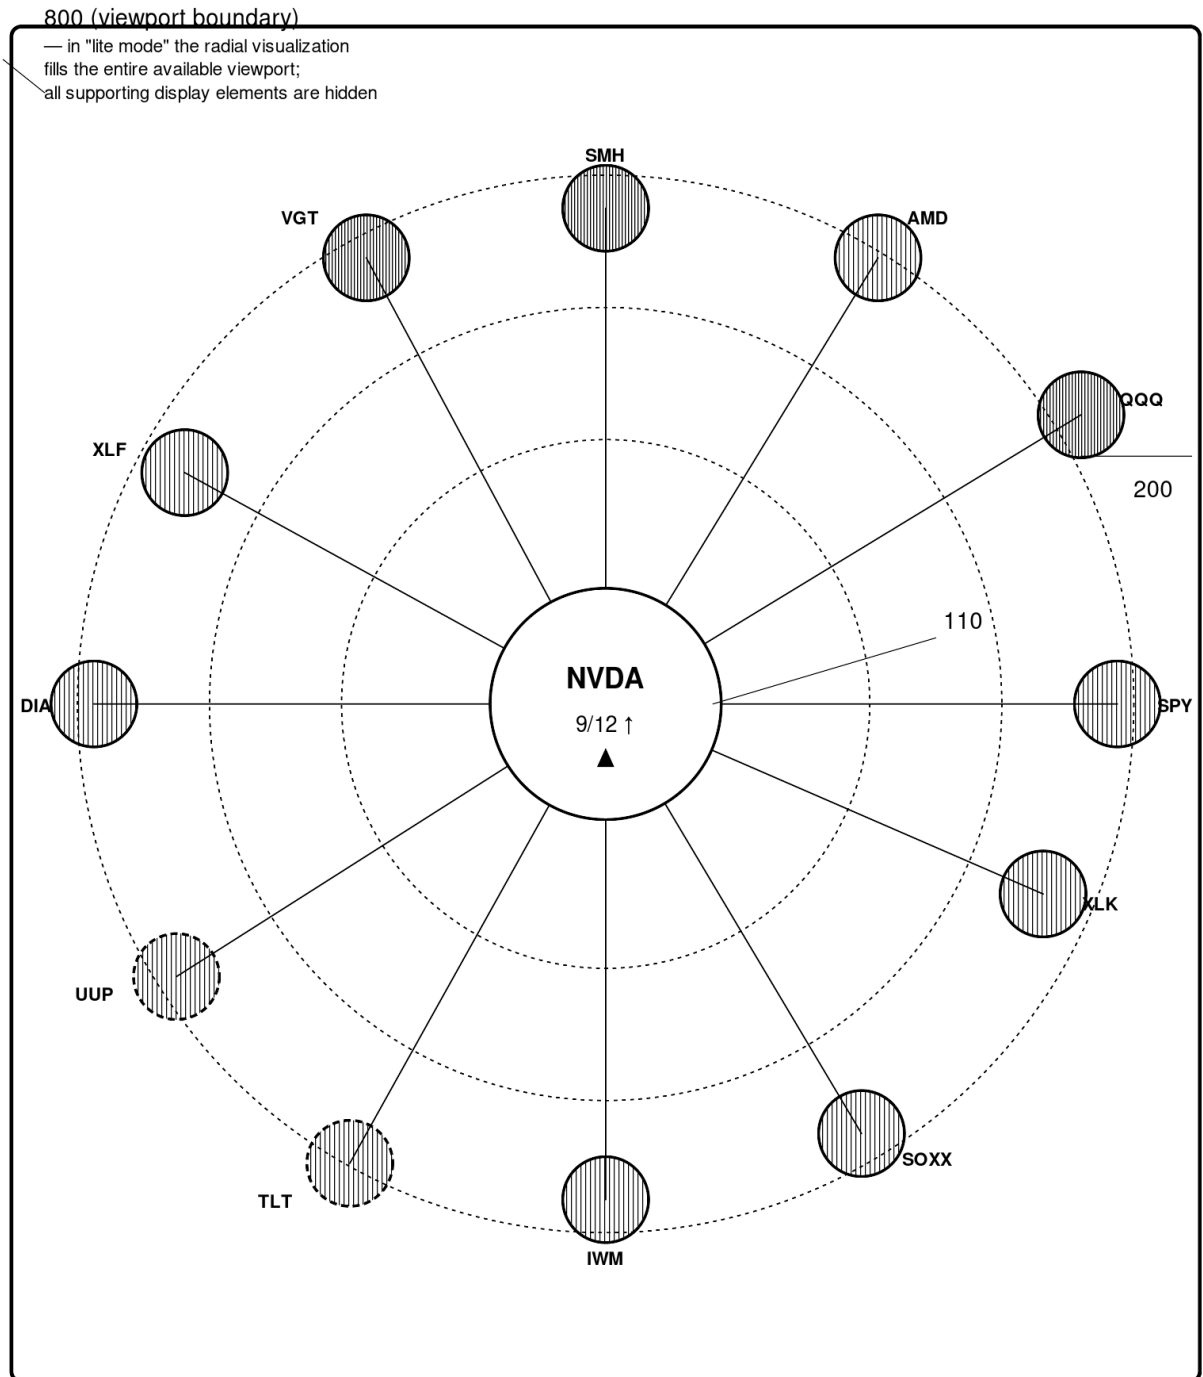

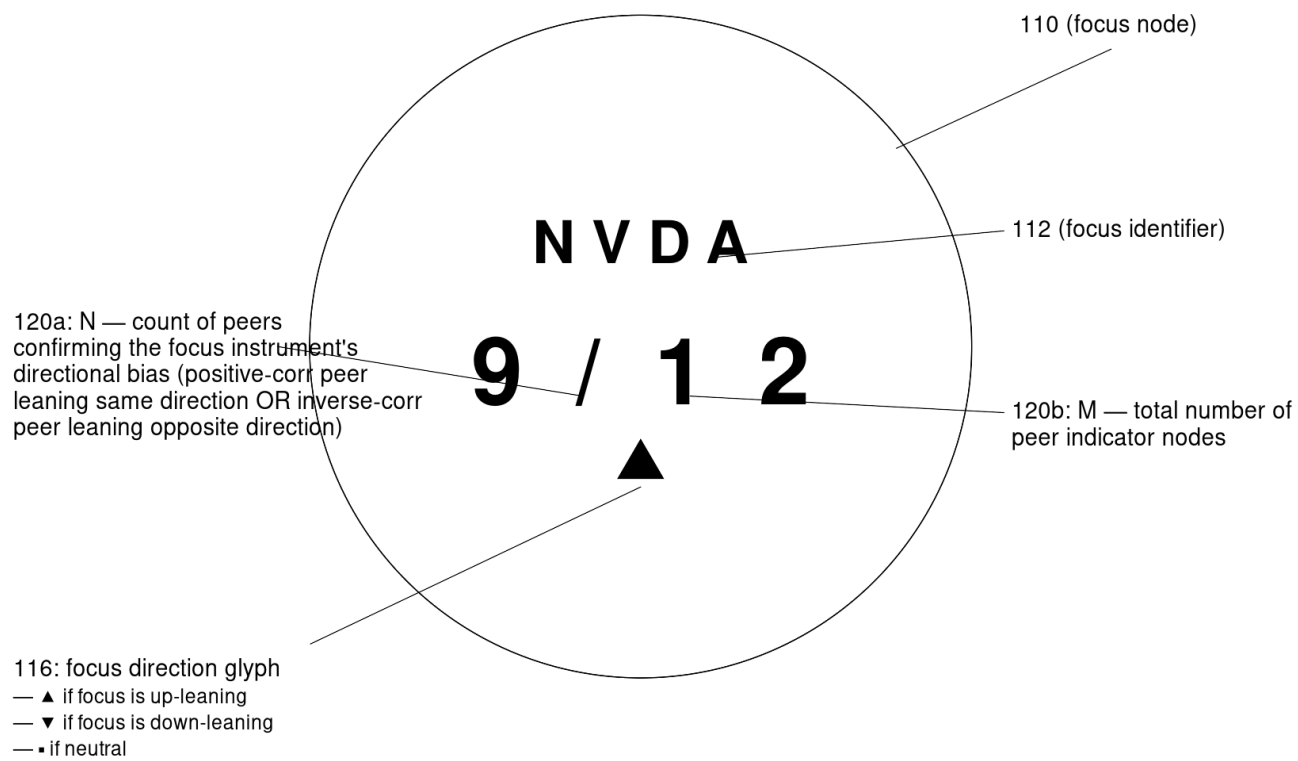

FIG. 4

Basket Verdict Display

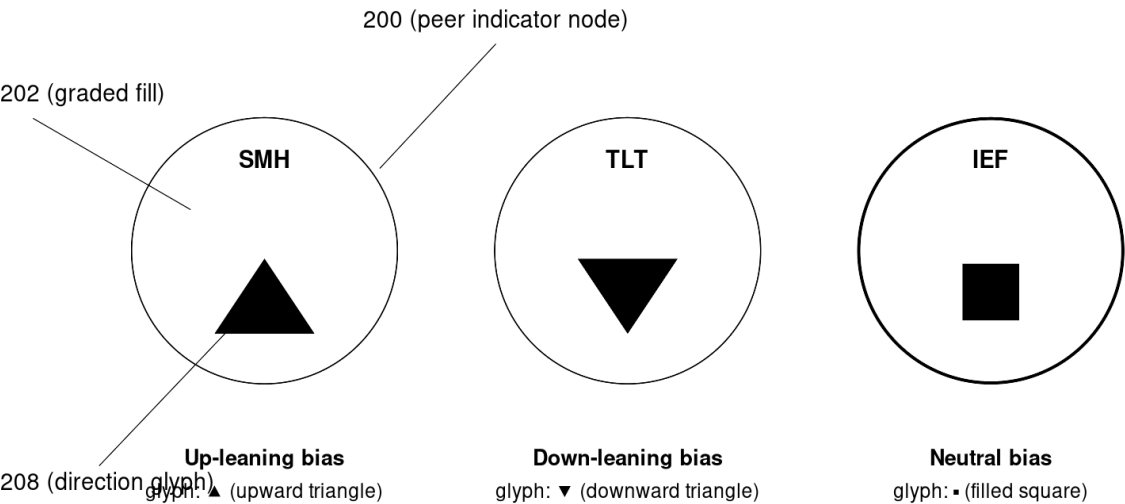

Reading: "Nine of twelve peers are confirming an up-leaning NVDA.
The basket verdict provides at-a-glance summary of basket alignment with the focus.

FIG. 5

Direction Glyph Encoding

Three peer indicator nodes shown side-by-side, each illustrating one of the three geometric-shape glyphs encoding directional bias.

Because the glyph's geometric shape itself unambiguously encodes the directional bias, the encoding remains readable to users with red-green color vision deficiency — providing a redundant accessibility channel alongside fill hue and border style.

Glyph	Directional bias	Color-independent?
▲	Up-leaning	Yes (shape only)
▼	Down-leaning	Yes (shape only)
■	Neutral	Yes (shape only)
